

Lifting unit for loads

according to RL 2006/42/EG

Tripods

Cantilever arms

Load winch

Product information:

The lifting device for loads of the type IKAR HL consists of a suspension construction in the form of a mobile aluminum tripod or a stainless steel cantilever arm of the type IKAR ASS and AASS. The ALKO Type 901 hoist is attached to the special mounting points of the suspension structures by means of a quick-change bracket.

Loads can be lifted, lowered and positioned using the hand-operated lifting mechanism with automatically acting load pressure brake. The detend system of the lifting gear ensures the load is always in its position.

Features:

Lifting unit for persons and load

- RL 2006/42/EG
- Attachment construction for IKAR tripods
- or attachment construction IKAR cantilever arms
- Lifting unit ALKO Typ 901
- Load capacity 300 kg

Application:

Driving through shafts, canals, narrow spaces

Areas of use:

Sewage engineering and container handling
